## **Forklift Training Schools Red Deer**

Forklift Training Schools Red Deer - Have An Efficient And Safe Work Place With Our Forklift Training Schools

Are you looking for work as a forklift driver? Our regulatory-compliant mobile equipment operator training offers instruction in types of lift trucks, pre-shift inspection, fuel types and handling of fuels, and safe operation of a lift truck. Hands-on, practical training helps individuals participating in obtaining essential operational skills. Program content covers current rules governing the operation of forklifts. Our proven forklift Schools are designed to provide training on these types of trucks: counterbalanced forklift, powered pallet trucks and narrow isle forklift.

When the forklift is in use, do not raise or lower the forks. Loads should not extend above the backrest. This is because of the possibility of the load sliding back in the direction of the operator. Check for overhead obstacles and make sure there is plenty of clearance before lifting a load. Stay away from overhead power lines. When the load is lifted straight up, tilt it back slightly.

While the load is lifted the lift truck will be less steady. Make sure that no pedestrians cross below the elevated fork. The operator must not leave the forklift while the load is raised.

When handling pallets, forks should be high and level enough to go into the pallet and extend all the way below the load. The width of the forks should provide even distribution of weight.

Chock the wheels and set the brakes prior to loading and unloading the truck. The floors must be strong enough to support the combined weight of the load and the forklift. Fixed jacks can be installed in order to support a semi-trailer that is not attached to a tractor. The height of the entrance door should clear the height of the forklift by a minimum of 5 cm. Mark edges of ramps, docks or rail cars and avoid them.
