

## **Aerial Lift Train the Trainer Red Deer**

Aerial Lift Train the Trainer Red Deer - The Aerial Lifts Train the Trainer Certification Program would teach trainers how to effectively train operators in safe industrial mobile machine operation. Trainers are given in-depth instruction about aerial lift equipment. The program is offered on an open enrollment basis and delivered at select training locations. Prior to certification, trainers are assessed and scored based on their understanding and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the number one training provider in the business, we offer the best hands-on training possible through chances to practice techniques and concepts learned in the classroom. In addition to hands-on experience, trainers develop general knowledge of instructional methods and equipment theory, classroom and field communication skills, and ability to efficiently train and evaluate operators. Trainers will gain an understanding about what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional methods included in communicating concepts within a classroom and/or field condition. Knowledge needs a training component to be efficient in workplace situations. There are three aspects of machine operation that the trainer must learn how to convey to operators: what to perform; how to do it; and why it has to be carried out.

In the program, trainers would be provided with the latest, detailed reference material to better help them convey the information to machine operators. The manuals used, contain detailed information regarding all aspects of industrial mobile equipment operator training. Included in the package are training aids that provide a visual reference to be able to improve the learning experience. The equipment-specific training products include essential materials for both the operator and the trainer: videos/DVD's, overhead transparencies, equipment models, safety message posters; digital training aids and stability pyramid.
